

TOK2EM

Our Words, Your Wisdom

ENGINEERING & PRODUCT SPECIFICATION

TOK2EM Admin Portal & Operations Hub

Centralized Management System for School Inquiries, Event Schedules, Keynote Assets, and Content Operations

Project Name: **TOK2EM Operations Portal**

Client / Speaker: **Brett Lasko — TOK2EM LLC ("Our Words, Your Wisdom")**

Author / Organization: **Go Execution Engineering Team**

Document Version: **v1.0 (Comprehensive PRD & Architecture Plan)**

Target Stack: **TanStack Start, React, Tailwind CSS, Nitro SSR, Supabase (PostgreSQL / Auth)**

Status: **Approved for Development**

1. Executive Summary & Project Purpose

TOK2EM LLC is a nationally operating youth intervention and keynote speaking organization led by **Brett Lasko**. The public website (`tell-to-em`) serves middle schools, high schools, alternative education centers, and community organizations looking to book high-impact assemblies and lived-experience mentorship circles.

As engagement and web traffic scale, manual inquiry handling via unorganized direct emails introduces latency, booking friction, and potential lead leakage. The **TOK2EM Admin Portal** is engineered to serve as an internal, role-protected control center that bridges public website lead generation with full-cycle event operations.

Primary Objectives:

- **100% Inbound Lead Capture:** Eliminate lost school inquiries by piping public website forms directly into a structured CRM pipeline.
- **End-to-End Tour Logistics:** Centralize event dates, venue addresses, travel details, and contact points for every school assembly.
- **Self-Service CMS:** Enable Brett and the team to curate student testimonials, update keynote descriptions, and refresh video reels without code deployments.
- **Instant Stakeholder Automation:** Deliver immediate SMS/email alerts on new submissions and automatically send schools an official Speaker One-Sheet packet.

2. User Roles & Permission Matrix (RBAC)

The system enforces strict role-based access control (RBAC) to ensure security and clean responsibility separation.

Role	User Profile	Permissions & Access Scope
Super Admin	Brett Lasko (Founder & Keynote Speaker)	Full unrestricted access: View/edit leads, pricing/quotes, accept contracts, edit CMS, manage user accounts, export financial reports.
Booking Coordinator	Executive Assistant / Agency Booking Agent	Read/write access to Inquiries, Pipeline, Calendar, and School Communications. Restricted from billing setup and user role management.
Staff / Read-Only	Travel Manager / Audio-Visual Technician	Read-only access to Event Calendar, Venue Arrival Schedules, and AV Rider documentation.

3. Core Functional Modules (PRD)

Module 1: Inquiries & Booking Pipeline (CRM)

A dedicated lead management engine designed specifically for the school speaking procurement cycle (inquiry → district approval → contract → event delivery).

- **Pipeline Stages:**
  - **New Inquiry**: Fresh submission from the public website; awaiting first contact.
  - **Discovery Call**: Initial conversation scheduled or held with principal / counselor.
  - **Quote / Hold Sent**: Formal fee quote, date reservation hold, and W-9 delivered.
  - **Confirmed / Signed**: Contract signed by district; deposit received; date locked.
  - **Delivered**: Assembly and breakout circles completed successfully.
  - **Archived / Lost**: Scheduling conflict, cancelled, or unresponsive.
- **Lead Detail Drawer:** Clicking any inquiry slides out an exhaustive dossier with school name, district, student count (e.g. 500-1,000), grade brackets, requested date, contact name, phone, email, and internal communication notes.
- **Filter & Search:** Real-time filtering by status, date range, state/city, and full-text keyword search.
- **Export:** One-click CSV/Excel export for board reporting and accounting.

Module 2: Master Event Calendar & Tour Logistics

A consolidated itinerary engine preventing double-bookings and tracking tour travel requirements.

- **Calendar Views:** Switchable between Monthly Grid, Weekly Schedule, and Chronological Itinerary List.
- **Event Day Checklist:**
  - Flight / Drive arrival times and lodging confirmation numbers.
  - School arrival and security check-in time.
  - AV & Sound check window (microphone testing, projector connectivity).
  - Keynote assembly start time and breakout circle duration.
  - Local point of contact cell phone for immediate day-of coordination.
- **Live Calendar Sync:** Secure private iCal feed URL allowing Brett to subscribe from iOS Calendar, Google Calendar, or Microsoft Outlook.

Module 3: Dynamic Content Management System (CMS)

Enables instant real-time updates to public website content without developer intervention.

- **Testimonials & Endorsements Manager:** Review newly submitted administrator feedback, edit quotes, assign author designations (e.g., *High School Principal, Des Moines IA*), and toggle live visibility.
- **Speaking Topics Editor:** Modify keynote titles (e.g., *Choices & Consequences*, *Behind the Mask*), descriptions, bullet points, and target age recommendations.
- **Video Reel & Gallery Manager:** Update YouTube or Vimeo video embed IDs and upload fresh stage photography.
- **FAQ Editor:** Add, reorder, or edit frequently asked questions regarding funding grants, assembly sizes, and booking timelines.

Module 4: Speaker Asset & Document Vault

Central repository for school district procurement compliance and event organizers.

- Official TOK2EM Speaker One-Sheet (PDF download manager).
- Technical Sound & Stage Rider (microphones, staging, audio specifications).
- W-9 Form & Federal Tax Identification documentation.
- School District Vendor Packets and Proof of Liability Insurance certificates.
- Standard Speaker Appearance Agreement templates.

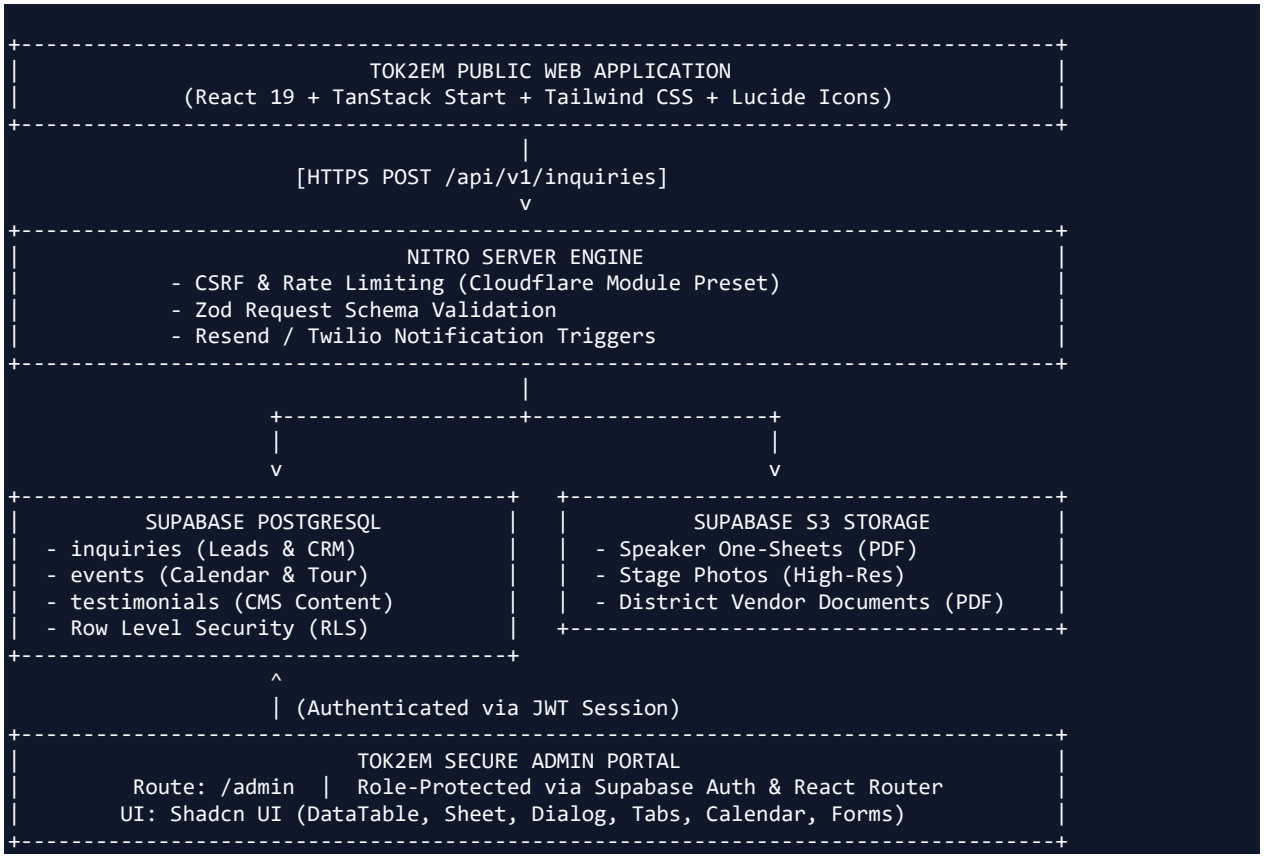

Module 5: Automated Communication & Notification Engine

- **Instant Admin Alerts:** Submissions trigger an immediate high-priority email alert to `brett.lasko@icloud.com` and optional SMS notification via Twilio.

- **Automated School Acknowledgment:** Inquirers instantly receive a branded email: "*Thank you for reaching out to TOK2EM — Brett Lasko's team has received your request*", with the official Speaker Packet attached.
- **Post-Event Follow-up Trigger:** Automated prompt sent 48 hours post-assembly requesting official testimonial feedback from the principal.

4. System Architecture & Technical Specifications

The portal is built into the existing **TanStack Start (Vite + Nitro SSR)** enterprise setup, ensuring instant page transitions, shared component design language, and zero hosting overhead.

5. Database Schema Design (PostgreSQL / Supabase)

Table	Key Columns	Description & Constraints
`inquiries`	`id, school_name, district, contact_name, email, phone, event_date, audience_size, event_type, status, notes, created_at`	Stores public website lead submissions. Indexed on `status` and `event_date`. Status enum: `new, contacted, quote_sent, confirmed, completed, archived`.
`events`	`id, inquiry_id, title, venue_name, address, city, state, start_time, end_time, av_checklist, travel_details, status`	Master event schedule and day-of tour logistics. Foreign key linked to `inquiries.id`.
`testimonials`	`id, author_name, author_title, school_district, quote, rating, is_featured, is_approved, sort_order`	CMS administrator endorsements. Only rows with `is_approved = true` render on public website.
`speaking_topics`	`id, slug, title, subtitle, target_grades, bullet_points, one_sheet_url, is_active`	CMS keynote topics catalog. Directly feeds public website topics grid.
`media_assets`	`id, title, category, file_url, file_size, mime_type, updated_at`	Speaker one-sheets, W-9 PDFs, technical rider docs, and high-resolution press photos.

6. Implementation Roadmap & Sprint Breakdown

The project is structured into 5 agile, two-week development sprints delivering progressive value:

Sprint	Focus Area	Key Deliverables	Timeline
Sprint 1	Foundation, Auth & Schema	Supabase project setup, database migrations, RLS policies, Nitro API routes for inquiry ingestion, and admin authentication guards.	Weeks 1 – 2
Sprint 2	CRM Pipeline & Leads Table	Interactive leads data-table, status Kanban board, inquiry detail slide-out drawer, search/filter controls, and CSV export.	Weeks 3 – 4
Sprint 3	Event Calendar & Tour Logistics	Interactive monthly/weekly calendar, event detail modals, logistics checklist (travel, arrival, AV check), and iCal subscription feed.	Weeks 5 – 6
Sprint 4	CMS Engine & Media Vault	Testimonial moderation panel, keynote topics editor, video reel link manager, and S3 asset uploader for speaker PDFs.	Weeks 7 – 8
Sprint 5	Automations, QA & Launch	Instant email/SMS triggers (Resend/Twilio), automated school confirmation with speaker packet, end-to-end testing, and production deployment.	Weeks 9 – 10

7. Resource Estimates & Definition of Done

Engineering Effort Allocation

- **Frontend Architecture & Admin UI:** 60 – 70 hours (TanStack Router, Shadcn UI table/sheet integration, responsive dashboard).
- **Backend API & Cloudflare/Nitro SSR:** 35 – 45 hours (Server endpoints, validation, email/SMS webhooks).
- **Database & Security (Supabase):** 20 – 25 hours (PostgreSQL schema, RLS policies, Auth configuration).
- **QA, Testing & Documentation:** 25 – 30 hours (Vitest unit tests, end-to-end validation, user guide for Brett).

- **Total Estimated Effort: 140 – 170 Development Hours**.

Definition of Done (DoD)

- All public inquiry submissions safely persist to database with zero data loss.
- Admin dashboard loads in < 800ms with full authentication and role protection.
- Super Admin can update testimonials and topics with immediate reflection on the live site.
- Calendar feed syncs cleanly with standard Google Calendar and Apple iOS Calendar.
- Automated confirmation emails deliver with 99.9% reliability and verified SPF/DKIM records.
